

آشنایی با Semantic Scholar

سکینه شکارچی

کارشناسی ارشد کتابداری و اطلاع رسانی پزشکی

تیر ۱۴۰۰

پاول آلن، بنیانگذار شرکت مایکروسافت به عنوان عضو فعال در پروژه پیشگام هوش مصنوعی است که موتور جستجوی Semantic Scholar را در نوامبر ۲۰۱۵ به منظور تسریع در فرایند تحقیقات علمی طراحی کرده است. این موتور جستجو امکان دسترسی به خدمات صورت رایگان را برای عموم پژوهشگران فراهم می‌سازد. هم‌اکنون سمانتیک اسکالر بیش از ۱۹۴ میلیون مقاله علمی را به خود اختصاص داده است.

ارزش این پروژه نوین به هیچ عنوان با پروژه‌های پاب مد و گوگل اسکالر قابل مقایسه نمی‌باشد؛ در مقایسه با این دو پروژه کاربردی، سمانتیک اسکالر از یک سو به منظور تعیین برجسته‌ترین، مهمترین و تأثیرگذارترین مقالات علمی - تحقیقاتی طراحی شده است و از سوی دیگر با بهره بردن از هوش مصنوعی و یادگیری ماشین به تحلیل محتوای مقالات و شناسایی ارتباط بین این داده‌ها اقدام نموده است.

اساس کار سمانتیک اسکالر غلبه بر حجم بالای اطلاعاتی است که همواره محققان درصدد هستند تا بتوانند با کوتاهترین زمان ممکن به برترین اطلاعات دسترسی پیدا کنند. به عبارتی دیگر، بهره برداری از پروژه هوش مصنوعی در استخراج داده‌ها به پژوهشگران سراسر جهان اجازه می‌دهد تا آن‌ها بتوانند از بین میلیون‌ها مقاله علمی منتشر شده در پایگاه‌های اطلاعاتی مختلف و شبکه جهانی اینترنت به سرعت مقاله مورد نظر و مرتبط با موضوع خود را بیابند.

مزایای این موتور جستجو:

- دسترسی رایگان
- تحلیل متن کامل مقالات
- به روز بودن
- سرعت بخشیدن به جستجو با استفاده از هوش مصنوعی
- غلبه بر حجم بالای اطلاعات

نحوه ورود به Semantic Scholar

شما می توانید از طریق آدرس زیر وارد شوید:

<https://www.semanticscholar.org/>

ایجاد حساب کاربری (Create account)

مزایای ایجاد حساب کاربری:

- ایجاد Alert برای مقالات جدید
 - ایجاد فیدهای پژوهش مناسب
 - ذخیره مقالات در کتابخانه
 - ارسال درخواست جهت ایجاد صفحه مربوط به نویسنده به منظور مدیریت بهتر مقالات
- نکته: توجه داشته باشید که برای دسترسی به مقالات نیازی به ایجاد حساب کاربری ندارید.

برای ایجاد حساب کاربردی مراحل ذیل انجام شود:

۱. مراجعه به صفحه اصلی از طریق ادرس: www.semanticscholar.org

۲. کلیک بر منوی "Create Free Account" در گوشه بالا سمت راست.

۳. پنجره ای نمایش داده می شود که از طریق آن، شما می توانید چگونگی ایجاد حساب کاربری (ایمیل سازمانی، گوگل، فیس بوک، توییتر یا ورود از طریق ایمیل و رمز عبور) را انتخاب کنید.

ایجاد حساب از طریق
Gmail

ایجاد حساب از طریق
Email

۴. پس از ایجاد حساب کاربری می توانید وارد حساب خود شوید و اطلاعاتی مانند نام و نام خانوادگی، وب سایت دانشگاهی، سمت فعلی و فیلد پژوهشی خود را در منوی "General Setting" بخش "Account Information" تکمیل نمایید.

ایجاد Alert

مزایای ایجاد Alert

- دریافت به روزترین مقالات در زمینه موضوعات پژوهشی نویسنده

انواع Alert در Semantic Scholar شامل:

- " Author Alerts on New Papers "
- " Author Alerts on New Citations "

نحوه ایجاد Alert

- ورود به حساب کاربری
- انتخاب گزینه "Edit Author Page" در صفحه نویسنده یا انتخاب گزینه "Settings" از طریق منوی کشویی "Account"
- انتخاب بخش "Alert Preferences"

The screenshot shows the 'Account Information' settings page. On the left, there is a sidebar menu with the following items: General Settings, Account Information, Contact Preferences, Alert Preferences, Author Page Settings, Display Information, Remove Papers, Add Papers, and Status of Changes. A green arrow points to 'Alert Preferences'. The main content area is titled 'General Settings' and 'Account Information'. It contains several input fields: 'Given Name' (filled with 'Nasiri'), 'Family Name' (filled with 'Somayah'), 'Academic Website' (optional, empty), 'What Is Your Current Role?' (optional, dropdown menu with 'Other' selected), and 'What Are Your Fields Of Study?' (optional, empty). A 'Submit' button is located at the bottom of the form.

Developing a minimum data set for malnutrition in children under five years

Behnaz Imani , Somayeh Nasiri, Farahnaz Sadoughi

Department of Health Information Management, School of Health Management and Information Sciences, Iran University of Medical Sciences, Tehran, Iran

Abstract: (713 Views)

Aim: To identify the main causes of malnutrition in childhood, it is necessary to collect quality and coherent data at the national level, which requires the creation of a minimum data set. Therefore, the present study aimed to design a minimum set of malnutrition data for children under five years of age.

Methods: This quantitative applied study was conducted in two stages in 2019. In the first step, the descriptive-comparative method was used to compare the data elements needed for malnutrition in children under five at the national and international levels. In the second stage, the initial MDS was designed and then validated by experts in two rounds using the Delphi method. The study population was composed of 30 experts in nutritionists and pediatrics who were selected by non-random purposive sampling (criterion Sampling) finally, the cases reached a collective agreement of more than 75% were included in the MDS. The items with a score below 50% were excluded from the proposed MDS. The collected data were analyzed by using descriptive statistics and Excel software.

Results: Approved MDS for malnutrition in children under five had 56 data elements and seven subsets, including child development, demographic and management, clinical and diagnostic examinations, nutritional status, medical history, and tests.

Conclusion: The development of MDS plays an important role in improving the quality of information management and early detection of childhood malnutrition. In order to gather uniform data, achieve an integrated information system, and facilitate the sharing of malnutrition data, it is recommended to use this MDS.
